

Date: October, 21, 2020

Time: 9:00 a.m. - 12:00 p.m. Eastern

Red Hat

Ansible Automation Platform

Learn how Red Hat Ansible is delivering agility and flexibility to IT organizations (networks, security, clouds, DevOps tools, and more).

About the Workshop

This instructor-led virtual workshop can help you learn more about Ansible Automation. Learn how to improve and convert complex tasks into repeatable Ansible Playbooks and deploy applications at scale based on your needs. The comprehensive workshop will teach you how to assign and manage roles for a RHEL environment and help you understand more about proactively identifying and remediating security, compliance, and configuration risks with Red Hat Insights integration.

Who can Benefit?

This workshop is geared towards Technical Pre-Sales Engineers, Architects, Practice Leads, Consultants, DevOps Engineers, Security Professional, Administrators.

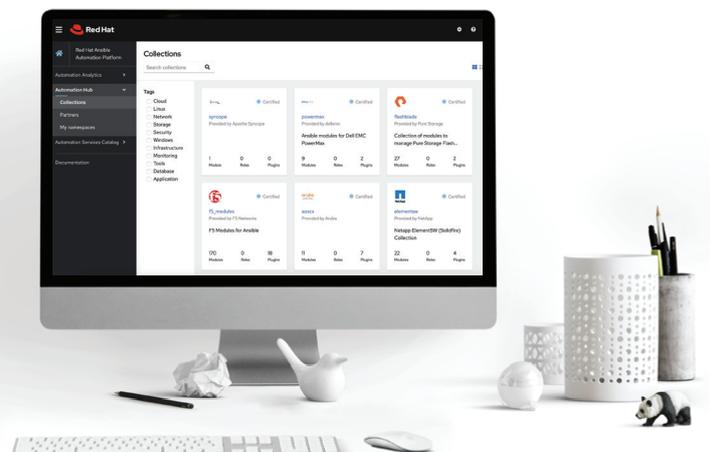

Workshop Topics

- Running Ad-hoc commands
- Writing Your First playbook
- Running Your Playbook
- Using Variables, Loops, and Handlers
- Running the apache-basic-playbook
- Roles: Making your playbooks reusable
- Installing Ansible Tower
